PHASE 1 / INTERNAL LMS

Frontend screens

Screen inventory for the ALC staff web application

This is the set of screens to build against the backend that is already in place. The frontend folder does not contain an application yet. The API is a staff tool: borrowers never sign in.

Work follows one path. Register the borrower, evaluate credit, record one approval, record the contract and the fund release, service the loan, then take repayment through to closure.

There are 25 screens, plus the shared shell below. Suggested routes are a frontend convention. The API does not require these paths.

Shared shell
After sign-in, show the staff member's name and roles. Group navigation as Dashboard, Borrowers, Applications, Agreements, Loans, Products, and Administration. Hide a destination when GET /api/auth/me does not include its permission. Format money with the currency from settings. Lists use page and pageSize. Show error.message from a failed request. Signing out drops the bearer token.

1 Sign-in and account

Every later screen assumes a bearer token from sign-in.

01 Sign in

Route /login

Access Public. Signed-in staff go straight to the dashboard.

Purpose Start a staff session.

Show
- Email and password.
- A clear message when the credentials are rejected.

Do
- Sign in and store the token.
- Land on the dashboard.

API POST /api/auth/login

02 Change password

Route /account/password

Access Any signed-in user.

Purpose Replace the signed-in user's own password. The seeded admin should be sent here.

Show

- Current password and new password.
- The new password needs a letter, a number, and 8 to 72 characters.

Do

- Save the new password.
- Reject a new password that matches the current one.

API POST /api/auth/password

2 Dashboard and analytics

One summary screen. Opening it refreshes overdue flags on the server.

03 Dashboard

Route /

Access dashboard.read. Every seeded role can open it.

Purpose Give staff the portfolio, pipeline, collections, and overdue picture.

Show

- Company name and currency.
- Portfolio: borrower count, active, overdue, and closed accounts, principal disbursed, outstanding balance, loans fully paid and waiting for closure, disbursements this month.
- Applications counted by status: draft, submitted, under review, approved, rejected, withdrawn, disbursed.
- Collections: posted today, posted this month, due this month, and collected against this month's dues.
- Overdue: account count, outstanding balance, installment count, and past-due installment amount.

Do

- Open a card into the matching list, already filtered.
- Treat the figures as read-only.

API GET /api/dashboard

3 User administration

Internal accounts, roles, permissions, and the four system settings. These screens are for an administrator.

04 Users

Route /users

Access users.read. Admin.

Purpose Find and open internal accounts.

Show

- Name, email, status, and roles.
- Search by name or email. Filter by active or inactive. Paginate.

Do

- Open an account.
- Start a new account when the user has users.write.

API GET /api/users

05 User form

Route /users/new and /users/:id

Access users.write. Admin.

Purpose Create an account or update name, status, password, and roles.

Show

- Email on create. First name, last name, status, and a password.
- Role checklist loaded from the role list. At least one role is required.
- On edit, email stays as stored. Password is optional and only sent when it changes.

Do

- Save the account, then replace its roles.
- Block deactivating your own account.
- Block deactivating the last active admin, or removing that person's admin role.

API POST /api/users PATCH /api/users/:id PUT /api/users/:id/roles GET /api/roles

06 Roles

Route /roles

Access roles.manage. Admin.

Purpose See the roles staff can be given.

Show

- Role name, description, and its permissions.
- The seeded roles: admin, loan officer, credit analyst, approver, finance officer, cashier, and viewer.

Do

- Open a role.
- Start a custom role.

API GET /api/roles

07 Role form

Route /roles/new and /roles/:id

Access roles.manage. Admin.

Purpose Name a role and choose its permissions.

Show

- Name, description, and a checkbox for every permission.
- Name is lowercase letters, numbers, and underscores, and is set only when the role is created.
- The admin role description can change. Its permissions cannot.

Do

- Save the role.
- Load the permission catalog for the checkboxes.

API POST /api/roles PATCH /api/roles/:id GET /api/permissions

08 System settings

Route /settings

Access settings.manage. Admin.

Purpose Keep the small set of system setup values.

Show

- Company name, 1 to 100 characters.
- Currency, a 3-letter code. Seeded value is PHP.
- Maximum installment-to-income ratio, greater than 0 and at most 1. Seeded value is 0.40.
- Overdue grace days, a whole number from 0 to 365.

Do

- Save each setting on its own.
- Show the current value and its description.

API GET /api/settings PUT /api/settings/:key

4 Borrowers and KYC

A borrower must be verified before an application can be submitted. Document screens are part of the borrower record, not separate pages. The API stores a file reference, not an uploaded file.

09 Borrowers

Route /borrowers

Access borrowers.read. Every seeded role.

Purpose Find a borrower and see verification at a glance.

Show

- Borrower number, name, mobile, email, and verification status.
- Search by number, name, email, or mobile. Filter by pending, verified, or rejected.

Do

- Open the borrower record.
- Start a new borrower when the user has borrowers.write.

API GET /api/borrowers

10 Borrower form

Route /borrowers/new and /borrowers/:id/edit

Access borrowers.write. Admin and loan officer.

Purpose Capture or correct the borrower profile. Verification is handled on the record, not here.

Show

- Name, date of birth, gender, and civil status.
- Email, mobile, and address.
- Employment status, employer, and monthly income.

Do

- Save a new profile and open the record.
- Save edits to an existing profile.

API POST /api/borrowers PATCH /api/borrowers/:id

11 Borrower record

Route /borrowers/:id

Access Open: borrowers.read. Update profile: borrowers.write. Set verification: borrowers.verify.

Purpose The KYC file: profile, verification, and identity documents.

Show

- Profile summary and verification status, notes, and when it was last set.
- Identity documents: type, number, issued and expiry dates, file reference, notes, and verification.
- Document types: national ID, passport, driver's license, tax ID, social security, or other.

Do

- Mark the borrower pending, verified, or rejected.
- Add a document, and update its details or its own verification.
- Edit the profile.
- Start an application. Warn if the borrower is not verified yet, because submit will be blocked.

API GET /api/borrowers/:id POST /api/borrowers/:id/verification POST and PATCH .../documents

5 Loan products and applications

Products are flat monthly interest only. An application copies the product's requirements. Borrower and product stay fixed after the application is created. Amount, term, and purpose can change while it is a draft. The rate is snapshotted from the product at submission.

12 Loan products

Route /products

Access products.read. Admin, loan officer, and viewer.

Purpose See the products staff can offer.

Show

- Code, name, monthly flat rate, amount range, term range, and active or inactive.
- Filter by status.

Do

- Open a product.
- Create a product when the user has products.write. That permission is on the admin role.

API GET /api/products

13 Product form

Route /products/new and /products/:id

Access products.write. Admin.

Purpose Define a flat-interest product and the requirements copied onto new applications.

Show

- Code, name, description, and monthly interest rate from 0 to 20 percent.
- Minimum and maximum amount, and minimum and maximum term from 1 to 360 months.
- Active or inactive.
- Requirements: name, description, and whether each one is required.

Do

- Save the product. The code is set on create.
- Add, edit, or remove a requirement. Removing it does not erase requirements already copied onto applications.
- Keep the maximum amount and term at or above the minimum.

API POST and PATCH /api/products POST, PATCH, and DELETE .../requirements

14 Applications

Route /applications

Access applications.read. Every seeded role except cashier.

Purpose Work the pipeline from draft through disbursement.

Show

- Application number, borrower, product, amount, term, rate, and status.
- Search. Filter by status or borrower.

Do

- Open an application.
- Start one when the user has applications.write.

API GET /api/applications

15 New application

Route /applications/new

Access applications.write. Admin and loan officer.

Purpose Open a draft for one borrower and one active product.

Show

- Borrower picker and active-product picker.
- Requested amount, term in months, and purpose.
- The product's amount and term limits, shown before save.

Do

- Create the draft.
- Show the copied requirements on the application record that follows.

API POST /api/applications GET /api/borrowers GET /api/products?status=active

16 Application record

Route /applications/:id

Access applications.read to open. applications.write to change a draft, requirements, submit, or withdraw.

Purpose The working file for one application, and the place that hands off to evaluation, approval, and the agreement.

Show

- Status, borrower and verification, product, amount, term, snapshotted monthly rate, and purpose.
- Requirements with required flag and status: pending, submitted, or waived.
- The credit evaluation, the approval decision, and the active agreement, once each exists.

Do

- While draft: edit amount, term, and purpose. Borrower and product stay fixed.
- Update a requirement while the application is draft, submitted, or under review.
- Submit from draft. This requires a verified borrower, an active product, amount and term inside the product limits, and every required item submitted or waived.
- Withdraw from draft or submitted.
- From an approved application with no active agreement, capture the first due date and create the agreement.

API GET, PATCH /api/applications/:id POST .../submit, .../withdraw, .../agreement PATCH .../requirements/:id

6 Credit evaluation and approval

Evaluation is one income review plus a fixed six-item capacity checklist. Approval is a single decision and requires that evaluation. The proposed installment is calculated by the API. Do not let the screen type it in.

17 Credit evaluation

Route /applications/:id/evaluation

Access View: anyone who can open the application. Save: credit.evaluate, which is the credit analyst and admin.

Purpose Record the income review and the capacity checklist, then recommend approval or rejection.

Show

- Stated monthly income from the borrower profile.
- Verified monthly income, existing monthly obligations, and notes.
- Calculated disposable income, proposed installment, installment-to-income ratio, policy ceiling, and whether the ratio is inside policy.
- Checklist, each item pass, fail, or not applicable, with an optional note: identity verified, income reviewed, source of income confirmed, obligations reviewed, installment within capacity, no adverse internal record.

Do

- Save while the application is submitted or under review, and before a decision exists. Saving moves the application to under review.
- A recommendation of approve requires every item to pass or be not applicable, and installment capacity must pass.
- A recommendation of reject can be saved with failed items.

API GET and POST /api/applications/:id/evaluation

18 Approval

Route /applications/:id/approval

Access Decide: credit.approve, which is the approver and admin. The recorded decision is also shown on the application record.

Purpose Record the one approval decision.

Show

- Read-only evaluation: income, installment, ratio, within-policy flag, recommendation, and checklist.
- Decision: approved or rejected. Comments are optional.

Do

- Save only when the application is under review and an evaluation exists.
- After a decision is stored, do not offer a second one.

API POST /api/applications/:id/approval GET /api/applications/:id/evaluation

7 Agreement and disbursement

The agreement is created from an approved application. Execution needs at least one recorded document. Disbursement releases the full principal, opens the loan, and builds the schedule. The release date cannot be after the first due date.

19 Agreements

Route /agreements

Access agreements.write, disbursements.write, or loans.read. Every seeded role can open the list.

Purpose Find contracts before and after release.

Show

- Agreement number, borrower, application, principal, first due date, and status.
- Search. Filter by draft, executed, disbursed, or cancelled.

Do

- Open an agreement. Creation itself starts from the approved application.

API GET /api/agreements

20 Agreement record

Route /agreements/:id

Access Same read access as the list. Record documents, change the due date, execute, or cancel: agreements.write, which is the loan officer and admin.

Purpose Hold the contract figures, the recorded documents, and the steps up to release.

Show

- Principal, monthly rate, term, total interest, total payable, regular installment, and final installment.
- First due date and status: draft, executed, disbursed, or cancelled.
- Documents: type, file reference, notes, and when each was recorded.
- The linked application, and the loan account once funds are released.

Do

- Change the first due date while the agreement is draft or executed.
- Record a document. This is a reference, not a file upload.
- Execute a draft once at least one document is recorded.
- Cancel a draft or executed agreement, with an optional note. A disbursed agreement stays.
- Continue to fund release when the agreement is executed.

API GET and PATCH /api/agreements/:id POST .../documents, .../execute, .../cancel

21 Fund release

Route /agreements/:id/disburse

Access disbursements.write. Admin and finance officer.

Purpose Record the manual release of the full principal.

Show

- Agreement summary: number, borrower, principal, and first due date.
- Release date, method (cash, bank transfer, or check), reference, and notes.
- The amount is the principal. Do not ask the user to type a partial amount.

Do

- Release only an executed agreement.
- Keep the release date on or before the first due date.
- After success, show the new loan account number and open that loan.

API POST /api/agreements/:id/disburse

8 Loan accounts and payments

The schedule is the source of truth for what is due. A payment goes to the oldest unpaid installment, interest first, then principal, and cannot exceed the outstanding balance. A fully paid loan stays active until someone closes it. Opening the dashboard or the loan list refreshes overdue flags.

22 Loan accounts

Route /loans

Access loans.read. Every seeded role.

Purpose See the book of accounts and which ones are overdue.

Show

- Account number, borrower, outstanding balance, status, and maturity date.
- Status is active, overdue, or closed.
- Search. Filter by status or borrower.

Do

- Open an account.
- Offer a manual refresh of overdue flags.

API GET /api/loans POST /api/loans/overdue/refresh

23 Loan account

Route /loans/:id

Access loans.read to open. loans.close to close, which is the cashier and admin.

Purpose Service one loan: balances, the release, the schedule, and the path to payment or closure.

Show

- Principal, total interest, total payable, outstanding principal, outstanding interest, and outstanding balance.
- Status, maturity, disbursement date, and a ready-to-close marker when the balance is zero and the loan is still open.
- Disbursement: amount, release date, method, and reference.
- Schedule: installment number, due date, principal, interest, total due, amount paid, and status.
- Payment history: receipt number, date, amount, and method.

Do

- Post a payment when the user has payments.post and the loan is not closed.
- Open a receipt from the history.
- Close the loan only when the outstanding balance is zero.

API GET /api/loans/:id GET /api/loans/:id/payments POST /api/loans/:id/close

24 Post payment

Route /loans/:id/payments/new

Access payments.post. Admin and cashier.

Purpose Post a manual payment and show how it was applied.

Show

- Account number, borrower, and outstanding balance.
- Amount, payment date, method (cash, bank transfer, or check), reference, and notes.
- The payment date cannot be more than one day ahead.

Do

- Post the payment. The amount must be greater than zero and no more than the outstanding balance.
- Show the receipt: allocations by installment, with interest and principal separated, and the new balance.
- Refuse a payment on a closed loan.

API POST /api/loans/:id/payments

25 Receipt

Route /receipts/:receiptNumber

Access loans.read. Every seeded role.

Purpose Look up one posted receipt.

Show

- Receipt number, account number, amount, payment date, method, reference, and notes.
- Allocations: installment number, interest applied, principal applied, and amount.
- The loan's current outstanding balance. That figure is the balance now, not the balance at the time of the receipt.

Do

- Open the related loan account.
- Print or share the receipt from this screen if the staff need a paper copy.

API GET /api/receipts/:receiptNumber

Who can open each screen

A mark means the seeded role can open the screen. Admin can open all of them. Changing a record is often narrower than opening it; those limits are on each screen above. Sign-in is public and is not in the table.

Adm admin Off loan officer Anl credit analyst Apr approver Fin finance officer Csh cashier View viewer

25 Receipt	Y	Y	Y	Y	Y	Y	Y

Approval can be opened by anyone who can open the application, so they can read the decision. Only the approver and admin can record it. The same split applies to credit evaluation: the credit analyst and admin save it, and the other roles who can open the application can read it.

Suggested build order

Build in this order so a loan can be walked through the API before the administration screens are finished.

1. Shell, sign-in, change password, and the dashboard.
2. Borrowers, the borrower form, and the borrower record with documents and verification.
3. Loan products, then applications, the new-application form, and the application record.
4. Credit evaluation and approval.
5. Agreements, the agreement record, and fund release.
6. Loan accounts, the loan account, post payment, and the receipt.
7. Users, roles, and system settings.

Status words to keep identical to the API: borrower verification pending, verified, rejected. Application draft, submitted, under review, approved, rejected, withdrawn, disbursed. Agreement draft, executed, disbursed, cancelled. Loan active, overdue, closed. Schedule line pending, partial, paid, overdue.
